

Groz-Beckert also satisfies the market for the sewing and combining of surfaces to a finished end product.

At this year's CISMA the product sector demonstrates that comprehensive services also belong to high-quality sewing needles, which are decisive for success, the company reports. This is exactly the approach of the service concept Sewing5, according to the manufacturer. The concept is based on the five S's (Supply, Solutions, Service, Superiority and Sustainability), which together represent consistent customer orientation and service competence for Groz-Beckert.

BTK Textile Implements And Goes Live With Datatex Now Suite Of ERP Solutions

Datatex has announced that BTK textile in Shakhty, Russia, has gone live successfully with its full NOW ERP suite of solutions in in high-tech (smart) textile manufacture.

The selection of the Datatex solutions was made after receiving responses to its RFP from the world's leading ERP solutions, and included very detailed sessions of presentations, system demonstrations and question and answer sessions. From BTK textile part selection team was made out of consultants, executives and the group IT team.

The implementation process was more challenging than average as it involved a totally new business process which was being created while implementing so procedures could be modelled and modified in real time.

The system covers all customer related activities, all production planning and machine scheduling, production management and control up to the level of data collection from each machine including automated real time fabric inspection.

Heimtextil 2016 expanding window, upholstery segments

International home and contract textiles trade show Heimtextil is expanding the window and upholstery segments at the Jan. 12-15 market due to increased demand for decorative and furniture fabrics, Messe Frankfurt announced.

The window and upholstery categories will occupy a large area in Hall 4.0 in addition to Halls 3.0 and 4.1.

"Last year, several renowned manufacturers of decorative and furniture fabrics said they would like to exhibit again. Unfortunately, we could not accommodate them at that time due to insufficient room," Heimtextil Director Ulrike Wechsung said. "For Heimtextil 2016, however, we have been able to make available a large area

of Hall 4.0 in addition to the existing exhibition space in Halls 3.0 and 4.1, thanks to the relocation of the 'Theme Park' in Hall 6. In other words, we have been able to cater very well for the current boom in furniture and decorative fabrics." Companies returning to Heimtextil in 2016 include Enzo Degli, Lulior, Texao, Marzotto Lab, Ratti Spa and Pozzi Arturo from Italy; Libeco-Lagae, Verbatex and Annabel Textiles from Belgium; and Penelope from Turkey. Hall 4.0 will also offer more space for the expanding digital-print segment. There, Heimtextil presents a comprehensive spectrum of technologies from leading print-machine manufacturers including Hewlett Packard, Epson, Durst, Xeikon, Mimaki, MS Printing Solutions, Komit, Reggiani and MTEX Solutions.

Lacom to exhibit new generation coating and laminating technology at ITMA

Lacom, a leading supplier of laminating and coating machines, will exhibit its technologies and share the company's knowhow at the upcoming ITMA 2015 exhibition for textile machinery that takes place from 12-19 November 2015 in Milan.

The manufacturer is inviting visitors to get to know its team of experts, who will offer information about Lacom's cutting-edge ideas and state-of-the-art technologies, and have a closer look at the company's products. During the trade show, Lacom will introduce a new generation of laminating and coating machines for the treatment of flexible substrates.

55,049 local and international trade visitors and buyers from 66 countries and regions, with more than 1200 exhibitors from 23 countries and regions. It included buyers from Decathlon, C&A, New Balance, and H&M, according to show organizers.

The four day show had a series of conferences and showcases were held concurrently with ShanghaiTex 2015, including a sustainable development of the textile and fashion industry conference, sportswear revolution conference, a digital print arena, and the 2015 Asia investment forum for Chinese textile manufacturers.

ShanghaiTex is sponsored by ShangTex Holding Co., Ltd., China Council for the Promotion of International Trade Shanghai Sub-council, and China Chamber of International Commerce Shanghai Chamber of Commerce, and organized by Adsale Exhibition Services Ltd., Shanghai Textile Technology Service & Exhibition Centre, and Shanghai International Exhibition Co Ltd. Acting as China's prime textile industry fair, the next ShanghaiTex exhibition will be held October 2017 will affirm the leading role in transformation and upgrading of the industry.

Technical textiles market to reach US\$ 193.7 billion by 2020

The global technical textiles market will reach US\$ 193.7 billion by 2020, amplifying at a compound annual growth rate (CAGR) of 4.5% during the forecast period 2015-2020, according to Future Market Insights' (FMI) latest research report Technical Textiles Market: Global Industry Analysis and Opportunity Assessment 2015-2020.

According to FMI, the key factors fuelling the growth of the technical textiles market include robust growth of the automotive sector in emerging markets and increase in number of end-use industries across various regions.

FMI says the key challenges for the global technical textile market are high pricing of finished products and concerns about toxic waste production.

Demand for e-textiles is also growing in emerging economies, and FMI estimates this trend to become more pronounced in the near future. Key players are focusing on research and development (R&D) activities to enhance the wearability of such textile materials. The technical textiles industry is witnessing rapid innovations to meet the changing preferences of consumers. It is also expected that government support programmes will provide an impetus to the manufacture of technical textiles. FMI has segmented the global technical textiles market on the basis of product type into nonwovens, composite, and others (knitting, braiding, and weaving).

According to FMI, the nonwovens segment has the largest share in the technical textiles market, accounting for 52.6% share in 2015. FMI expects this segment to expand at a CAGR of 5.1% during the forecast period 2015-2020.

The composite segment held a 14.7% share of the global technical textiles market in 2015 but FMI estimates it will account for 14.4% market share by 2020.

The others segment, which includes knitting, braiding, and weaving, accounted for 32.7% share of the technical textiles market in 2015. FMI estimates this segment to expand at a CAGR of 3.8% during the forecast period and reach a valuation of US\$ 61 Bn.

Textile companies aim to quadruple exports by 2025

While the much celebrated Egyptian cotton has fallen from grace in recent years, elsewhere the textiles industry has been truly blossoming. Now representing 20% of manufacturing exports, the sector is buoyed by an initiative that has both helped increase trade with the U.S.

The label "Egyptian cotton" on a set of bed sheets evokes sweet dreams of luxurious softness. Indeed, Egyptian cotton was once the bar against which all other linens and clothing were measured. So sought-after was it that some said Egyptian cotton was as much a symbol of Egypt as the Pyramids of Giza. "Egypt has had a long history of textile manufacturing and we have one of the best cottons in the world," says Mohamed Kassem, Chairman of the Ready Made Garment Export Council, a public-private partnership between the Ministry of Trade and Industry and some of Egypt's most prominent clothing exporters.

Groz-Beckert to present its Sewing5 concept at CISMA 2015

Groz-Beckert, the leading provider of industrial machine needles, will present the company's innovative products and services at the CISMA exhibition, under the topic area Spare parts and accessories.

The largest trade fair for industrial sewing, CISMA, is set to take place from 23-26 September 2015 at the Shanghai New Int'l EXPO Center.

Covering an area of more than 107,000m², the exhibition will feature more than 1,200 exhibitors, who will present products associated with the industrial manufacturing of clothing and other sewn products. A partner for the entire textile industry,

World Textile News

Countdown to ITMA 2015

ITMA 2015, the largest textile and garment manufacturing technology showcase, is expected to welcome more than 100,000 visitors from around the world when it opens its doors on 12 November in Milan. Here we take a first look at the show and what visitors can expect to see. Watch this space for further news, as ITMA gets closer. The 8-day show is still the go to place for innovation in textile machinery by a long way and as usual it promises to be an interesting one. Personally this will be my ninth ITMA, having now attended as student, exhibitor, visitor and member of the international press – and I'm very much looking forward to attending this year's show.

Show owner CEMATEX says it is clearer than ever that sustainability remains a topic of vital concern to manufacturers throughout the textile supply chain and accordingly in April it released the latest edition of the ITMA Sustainability Bulletin – the quarterly report on environmental performance.

In 2014, around 56% of the sales of Italian-built machinery for manufacturing textiles were achieved in Europe. This is somewhat contrary to the general impression that the lion's share of the market these days is in Asia. Adrian Wilson reports that as it celebrates its 70th anniversary this year, ACIMIT – the trade association representing Italy's manufacturers of textile machinery – has high expectations of ITMA 2015.

PREMIERE VISION TO PRIZE EIGHT PV AWARDS WINNERS

The upcoming edition of Premiere Vision, now single organizer of six fully-integrated shows, all taking place from 15 to 17

September 2015, will showcase all synergies between the various shows while presenting each event's own specificity.

As a consequence of so many different trade show events happening at once, the 7th edition of the PV Awards competition will no longer award four categories, but six – three for fabrics and three for leather. To fulfil their goal this edition's prestigious jury will be presided by the design duo Livia Stoianova and Yassen Samouilov, founder of the haute couture brand On Aura Tout Vu. In past editions among noteworthy jury presidents there were Ennio Capasa (Costume National), Veronique Nichanian (Hermes) and Felipe Oliveira Baptista (Lacoste).

The three jury prizes for Premiere Vision Fabrics will be The PV Fabrics Grand Jury Prize 2015, for the most outstanding, symbolic and pertinent fabric of the season, The PV Fabrics Handle Prize 2015, for the fabric allying the most astonishing tactile and behavioral qualities and The PV Fabrics Imagination Prize 2015, for the boldest and most original fabric in terms of decoration, technique, finishing, innovation or technology.

The three new prizes for Première Vision Leather will be The PV Leather Grand Jury Prize 2015, for the most exceptional, symbolic and pertinent leather of the season, The PV Leather Handle Prize 2015, for the leather combining the most amazing tactile and behavioral qualities and Le PV Leather Imagination Prize 2015, for the most daring, original and amazing leather in terms of decoration, technique, finishing, innovation or technology.

Shanghai Tex a textile technology show 2015 recorded huge traffic of visitors

A new business matching programme hosted at textile machinery exhibition ShanghaiTex 2015 last month recorded

“This growth for the Italian market is somewhat unexpected” states ACIMIT President Raffaella Carabelli, “It’s highly likely that the incentives implemented by the Government may have contributed to this light recovery in our sector. The rest was certainly achieved by the healthy situation of various sectors downstream from our own.” With ITMA 2015 so imminently close, the global trade fair scheduled in Milan on November 12 - 19, businesses are waiting on the innovations that will be presented in Milan. “The recovery of our domestic market is certainly a good omen for ITMA, where 450 Italian exhibitors will be present - 27% of the total number of companies.”

As for foreign markets, official data from ISTAT confirm a recovery for the first four months of the year in various textile machinery importing Countries. India, for one, has resumed its growth trend (+6% over the first quarter of 2014), and there’s been a surprising rise in exports to Bangladesh (+187%), with EU markets also appearing to show good form. “We’re waiting for a recovery from China, where investments in machinery are still low compared to a year ago,” observes Carabelli. “But ACIMIT has mainly been targeting the market in Iran.” “For years,” ACIMIT sources explain, “Iran was a benchmark for Italy’s textile machinery industry. International sanctions have effectively halted the flow of machinery exports towards Iran, penalizing many Italian manufacturers. The recent agreement on the nuclear issue opens up a window for a recovery in investments in textile technology by Iran’s textile sector, after years in which the process of industry modernization has been slowed by a regime of sanctions.” The negative trend for Italian exports was stopped in 2014. Sales of Italian textile machinery grew 170% compared to 2013, amounting to 14 million euros.

Self-Cleaning Woolen Fabrics Produced in Iran

Iranian researchers produced woolen fabrics at laboratorial scale, which have antibacterial and antifungal properties.

The produced samples show self-cleaning properties too under the radiation of sunlight.

Woolen products are very good sources for the growth of bacteria and microorganisms due to their protein structure, and they are sensitive to alkaline and sunlight, and they have strength limitations. According to Amir Behzadnia, one of the researchers, this study was carried out aiming to improve the properties of woolen products through special finishing process, including increasing the self-cleaning, antibacterial, antifungal, acidic and alkaline resistance. This objective was achieved by creating a homogenous coating made of a nanocomposite of zinc oxide/nitrogen – silver (N-Ag/ZnO) on the fabrics.

Based on the results, the processing of the woolen fabric samples

by using optimum amount of honeycomb nanocomposite such as N-Ag/ZnO improves the biological, mechanical and hydrophilicity of the fabrics. Among the other advantages of the use of this nanocomposite in the production of fabrics, mention can be made of creating a delay in flammability, increasing the whiteness degree and decreasing the alkaline and acidic solubility without creating the cellular toxicity.

Results of the research have applications in textile, polymer, and ceramic industries and in other applicable surfaces. They can also be used in medical and military industries.

Ultrasonic bath has been used in the finishing process of the fabrics. By using the bath, the process is carried out in one stage at low temperature at shorter time. Ultrasonic waves are also the cause of the homogenous distribution of simultaneous charges of silver and nitrogen on the surfaces of zinc oxide nanoparticles. Finally, the abovementioned properties are created in the final product by processing of the woolen fabrics with the nanocomposite.

Results of the research have been published in *Ultrasonics Sonochemistry*, vol. 27, issue 1, 2015, pp. 200-209.

340 companies to attend 21st IRANTEXT exhibit

The 21st edition of Iran International Exhibition of Textile Machinery, Raw Materials, Home Textiles, Embroidery Machines and Textile Products, known as IRANTEXT, will host 340 Iranian and Foreign companies. The exhibit will be held at the Tehran Permanent International Fairgrounds from September 4 to 7, with 162 Iranian companies and 178 foreign firms in attendance.

The number of foreign participants shows 15 percent growth compared to the previous edition of the event.

Companies from South Korea, Spain, Italy, United Arab Emirates, Turkey, India, China, Taiwan, Germany and Pakistan will showcase their latest achievements and products in the exhibit.

Dull market stops textile units in Iran

Some of textile units in Iran have stopped production due to recession and accumulation of products in the market, said Ahad Kermani, member of the Iranian textile association.

“Each year, textile units used to stop production for a week or two, but this year some factories have been shutting down for over one months”.

Irregular imports of textile products from China, Turkey, and India, as well as low demands in the domestic market are the main reasons of the recession, he added.

Iran Textile News

Turkey competes with France for Iranian market

The anticipated removal of sanctions on Iran opens up wide political and economic opportunities for that country's authorities. A number of European countries are already expressing great interest in Iran's economy. One of them is France.

The visit of the French Foreign Minister Laurent Fabius to Iran is indicative of the special attention attached by Paris to the development of relations with Tehran. During his visit to Iran, Fabius had meetings with Iranian President Hassan Rouhani and the Foreign Minister Mohammad Javad Zarif.

He also met with the Iranian parliament's chairman, Ali Larijani, the vice president and the head of the Environmental Protection Organization, Masoumeh Ebtekar, and the minister of industry, mine and trade, Mohammad Reza Nematzadeh and others.

France focuses mainly on the car industry of Iran. Earlier France's Peugeot has said that it intends to create a joint venture with Iran to manufacture cars. It is expected that 30 percent of the cars to be produced by that joint venture will be exported. Aside from that, another French car manufacturer Renault and Japan's Suzuki have given their consent to return to the Iranian market.

But apart from France and other Western countries, Turkey, the nearest neighbor of Iran, is also rushing to enter the Iranian market. Turkish companies well understand that the upcoming six-month period is very important in terms of entering the Iranian market.

The sanctions imposed on Iran were not of serious importance for Turkey, since over 100 Turkish companies were operating in this country during the sanction period. As many as 38 Turkish companies operate in Iran's Aras free economic zone alone. Benefits (simplified taxes) are offered to Turkish investor companies in Iran. Earlier, Seref Fayat, the Chairman of the Board of Directors

of the Turkish Textile Association, told Trend that Iran is a huge sales market for Turkish textiles.

"Turkey has an advantage in the field of logistics and delivery of textile products to Iran compared to many countries," he said. Fayat said that currently, there are 20 brand Turkish textile companies on the Iranian market and their number can be easily increased up to 500 for three years.

Taking into account Turkey's rich experience in the textile production, one can say that it will be difficult for any other companies to compete with Turkish firms on the Iranian market.

ACIMIT Reports Textile Machinery Orders On The Rise For The Second Quarter, Iran Now The Main Export Target

Orders of textile machinery for the second quarter of 2015 confirm the positive trend already under way during the first three months of the year. Raffaella Carabelli, President of ACIMIT: "Increased orders on the domestic market are an unexpected but welcome development: a good omen for ITMA 2015. Abroad, we're very optimistic on Iran." For the second quarter of 2015, orders of Italian textile machinery, as compiled by ACIMIT, the Association of Italian Textile Machinery Manufacturers, recorded a 15% increase over the same period of last year. The value of the orders index for this period amounts to 99.4 points. Orders have made a definitive move in foreign markets (+21% over the same quarter for 2014), marking a fourth consecutive period of growth. Italy remains under observation, but is showing sure signs of a recovery. Indeed, domestic orders have risen 7% compared to the second quarter of 2014.

About International Textile Fair

International Textile Fair- Dubai is UAE's premier platform for fashion and fabrics. ITF, Dubai showcased Pre-collection Spring/Summer 2016 and Autumn/Winter 2015 highlights. With close to 150 exhibitors, the Fair aims to expand with each event become a major influence on the UAE fashion scene.

Principally a "trade only" event, ITF provides a professional and conducive atmosphere to business and networking for manufacturers, traders and designers both internationally and within the region. In response to the need for a dedicated trade exhibition in Dubai- UAE, the show has been designed as a quality event for the Fashion Fabrics Business in the UAE. ITF is attended by leading fashion and apparel buying houses from the Middle Eastern market.

SHOW VISITOR PROFILE:

Fabric Importers, Distributors and Wholesalers.

Garment Exporters and Manufacturers.

Buying houses & agents.

Local & International Retail Chains.

Department Stores.

Apparel Brands.

Fashion Designers & Merchandisers.

Design Studios & Institutes.

For more information and event registration, visit : <http://www.internationaltextilefair.com/>

Media Enquires:

Email: info@nihalanievents.com

Between hosting more exhibitors to increasing audience bandwidth, it is clearly evident that the ITF is a step closer to its aim of "achieving textile versatility." The fair is poised for further growth, but for Dilip Nihalani (Managing Director, ITF) the focus invariably remains the same. He explains, "At ITF, we strive to provide a professional atmosphere conducive to business and networking; and acknowledging U.A.E's rise as the leading industry for textile industry automation."

Dubai, U.A.E: Although at the epicenter of the Dubai textile scene, the ITF is sending ripples not only in the Middle East, but across the world too. The October edition might be 8 weeks away, yet the anticipation surrounding it is already discernible. With the ITF newsletter providing an in-depth reasoning behind their philosophy and the social media channels sparking off the razzmatazz, one would be forgiven to believe that the ITF has already begun.

Not content with its diligent social media presence, the ITF has also incorporated newsletters and e-shots into its digital campaign. The newsletters, featuring interviews with prominent international exhibitors, seem like compact trade reports in themselves; leading company executives provide a valuable insight about local and foreign markets. Catching up with the exhibitors and tracking their achievements, the "ITF NEWS" tab presents detailed exhibitor profiles. The e-shots have emerged as a viable pre-cursor to the fair itself; featuring Q & A sessions with the likes of Pantone and Taroni Silk.

With the majority of exhibitors hailing from Europe and the Middle East, the ITF is slowly gaining foothold in Western Asia too. Urganch Bahmal (Uzbekistan) and Safir Textile (Turkey) recently confirmed their presence at the October edition of the ITF; and so have Central Asian powerhouses Uni Textile Co. and SKETCHES.

The ITF commands a global presence not only through its exhibition, but also through its laudable media reach; collaborating with reputed international media groups like Expomap (Russia), NZ Apparel (New Zealand) and Eye of Riyadh (Saudi Arabia).
